

## DELIVERY RIBO

The contact lens that releases Riboflavin for digital eye strain with UV and HEV light protection

### Wear Method

Daily

### Benefits

- DELIVERY RIBO contact lenses are enriched with Riboflavin, Vitamin E-TPGS, Hyaluronic Acid and **TSP®**.
- Riboflavin, once released on the cornea, strengthens the bonds between the collagen fibers of the eye.
- Vitamin E-TPGS is a penetration enhancer that guarantees the correct diffusion of the substances, released by the contact lens, in both the anterior and posterior segments of the eye.
- The EDOF design of the lens is characterized by a central zone with positive spherical aberration and an external aspheric monofocal zone.
